

---

Claim 1: (original) A data storage medium, the data storage medium having control data stored in the form of a data structure, the data structure comprising:

a data area that includes information for control of access to regions of the data storage medium, wherein a region is less than the entire data storage medium; and a header, the header further comprising a set of bits, each bit corresponding to a form of control for access to the entire data storage medium.

R  
Claim 2: (new) A data storage medium, comprising:

a data area that includes data specifying control of access to regions of the data storage medium, wherein a region is less than the entire data storage medium; and a header, the header including at least one bit specifying control of access to the entire data storage medium.
